

Diesel Fuel Storage Monitoring

Monitor diesel volumes and flow rates on your remotely located fuel storage tanks.

Increase efficiency by monitoring fuel usage and optimising storage capacity.

Verify diesel delivery times and volumes.

Reduce theft by knowing when fuel is being drawn.

Use the ORB-X1 current source to measure fuel-level with a fuel-compatible 4-20mA level sensor.

Receive an automated warning when fuel levels drop below your minimum requirement.

A pulse output fuel flow sensor connected to the ORB-X1 frequency input will measure fuel-flow.

Be advised when diesel is being drawn and monitor the volume supplied.
