

# Moored Boat Monitor

Peace of mind for owners of boats left on moorings.

Know that your boat is still on it's mooring and receive an alert if the position changes.

Monitor bilge water levels. Receive alarms if water level rises.

Ensure the boat battery is changed; receive a low battery warning.

Monitor wind speed and direction.

The ORB-X1-G has an integrated GPS for position monitoring.

Use the OB-X1 current source to monitor bilge level with a 4-20mA depth sensor or connect a level-switch to an input.

The ORB-X1 uses very little power and will not drain the boat battery whilst providing battery condition reports.

Connect a pulse output wind-speed indicator connected to the frequency input.
