

Use the Integrated Bluetooth on the Senquip ORB to pair to multiple sensors.

Monitor location with the integrated GPS and pitch and roll with the integrated accelerometer.

Generate over pressure and temperature warnings and alarms.

Monitor remotely or locally on a tablet or phone.

Hydraulic, Pneumatic System Monitoring

Eliminate live work with remote monitoring of temperature and pressure in hydraulic and pneumatic systems.

Pair industry standard Bluetooth pressure and temperature sensors with a Senquip ORB for continuous system monitoring up to 1kBar.

A safer and more efficient way to test and monitor hydraulic pressure in mining, construction, rail, and marine industries.
